

## Vocational Education (Kaushal Bodh) Months: April-June 2026

Over the past two months, the CBSE Kaushal Bodh programme for Classes VI–VIII has steadily evolved into a meaningful and enriching learning experience. Through regular hands-on activities, students have enthusiastically embraced skill-based education, making learning more engaging, practical, and relevant to everyday life.

Class VI students explored growing Microgreens, learning about sustainable practices, the benefits of nutritious food, and the process of cultivating microgreens. Class VII students learnt different types of basic stitches and applied these skills through handkerchief making, fostering creativity, patience, and fine motor skills. Class VIII students developed essential life-saving skills by preparing a first aid box and learning the preparation and importance of ORS (Oral Rehydration Solution), equipping them to respond confidently to common health emergencies.

The consistent implementation of these activities has fostered curiosity, creativity, teamwork, problem-solving, and self-reliance among students. The programme has successfully met its objectives by integrating experiential learning with life skills, empowering students to become confident, responsible, and future-ready learners. We are proud of the remarkable progress made and look forward to continuing this journey of holistic education.
